

3HUE marketing enablement — status (updated 2026-09-09, v3 pass)

The document set (read in this order)

1. **claude/3hue-maturity-gap-report.html** — *The Maturity Gap*. The research: why orgs don't mature on NIST/ISO/SOC 2/ITIL/COBIT, 60+ verified 2024–2026 statistics, and social-listening exhibits with working links across LinkedIn, X, Reddit, YouTube, TikTok and Hacker News.
2. **claude/3hue-icp-forcing-function.html** — *The Forcing Function*. The ICP: three ranked segments, an interactive 100-point fit scorer with tier thresholds and plays, buying-committee personas, trigger detection signals, disqualifiers.
3. **claude/3hue-message-stack.html** — *The Message Stack*. The words: core narrative, positioning, three pillars, per-segment messaging, **claims library with substantiation status**, objection handling, four battlecards, approved vocabulary, boilerplate.
4. **claude/3hue-capability-map.html** — *The Capability Map*. The offer architecture: Snapshot → Build → Operate, and the service pages each CTA lands on.
5. **claude/3hue-brand-sheet.html** — *3HUE Brand Sheet*. The identity: logo system + ISG/OPS/ITG marks, color with WCAG contrast analysis, typography, UI tokens, usage rules, verbal identity and naming conventions, asset inventory, AiVRIC, observations.
6. **claude/3hue-ship-list.html** — *The Ship List*. Execution: 90-day sequence, questionnaire-teardown lead magnet, ready-to-paste landing page copy, six-post founder series, four-touch outreach sequence, eleven-question discovery script, offer one-pagers, case study rebuild spec, six measures.
7. **claude/3hue-handoff-reconciliation.html** — *The Handoff*. Reconciles the inherited 2024 strategy PDF and the 2026–2027 GTM deck against the research.
8. **claude/3hue-marketing-folder-structure.html** — *The Marketing Folder*. Where everything lives.

YouTube — the live plan

9. **claude/3hue-youtube-rollout.html** — *The Rollout (v3, 9 Sept 2026)* — **THIS IS THE LIVE CHANNEL PLAN.** <https://claude.ai/code/artifact/575c1784-b1fd-46c0-85db-b0c44383a45d> Six franchises, the 12-week dated rollout (launch 5 Oct), the one-shoot-nine-assets production model, the linking map, metrics and the decision log. v3 folds in the 9 Sept Data Book.
10. **"3HUE YouTube Data Book"** — <https://claude.ai/code/artifact/c520509a-35ab-4502-a7aa-0535ab8434fe> — the evidence behind The Rollout: every vidIQ figure consolidated, keyword demand by cluster, 26 channel benchmarks, five video-level deep dives, format rules with confidence ratings, title scores, corrections log, and stated limits.
11. ~~**"The 3HUE Channel"**~~ — <https://claude.ai/code/artifact/e6cacc32-098c-4fa7-ae3e-0bcd32cd9132> — **SUPERSEDED by The Rollout.** An earlier six-series architecture written before the GTM deck and the on-camera bench were known. Kept for history only; do not work from it.

Research notes (raw material): [claude/research-notes/01-company-profile.md](#), [02-market-data.md](#), [03-social-listening.md](#), [04-youtube-channel-plan.md](#) (superseded, see above), [05-youtube-keyword-competitor-data.md](#) (all vidIQ pulls, Parts A and B), [06-inherited-docs-reconciliation.md](#).

Core thesis

3HUE's best customer has just been told to prove its security by someone with leverage — a customer, insurer, investor or regulator — and has nobody inside to do it. Orgs don't buy maturity on principle (68% have ≤ 1 security FTE; 61% only certify when a contract requires it; 72% still run periodic rather than continuous assessment). Segments: **Hue 01 Provable Vendor** ~60%, **Hue 02 Portfolio** (PE under \$25B AUM, 29% vs 81% diligence gap) ~25%, **Hue 03 Regulated Operator** ~15%.

What changed in The Rollout v3 (9 Sept)

All four changes come from a second vidIQ pull that added Dejan Kosutic (426,000 subs — the largest channel in the category and the closest strategic twin to 3HUE + AiVRIC) at video level. He was not in the v2 competitive set.

1. **New sixth franchise — The Walkthrough.** Biweekly, 6–12 min, product demos on the 3HUE channel. v2 sent AiVRIC content *outward* to its own property; that was wrong. Dejan's five product overviews are his top five videos (~2.9M views combined); Stuart Barker's toolkit demos are his #2, #7, #8. Two independent channels, same result. House framing: *"How does it work? [product overview]."*
2. **The crossover confirms the lane.** "ai governance" fell 55,887 → 47,568 (–34% vs baseline) while "iso 42001" rose 13,560 → **17,487** (+29% w/w) and "ai compliance" nearly doubled to 6,038. **Title with ISO 42001; position with AI governance.**
3. **Runtime ceiling lowered.** Flagship trimmed 15–20 → **12–18 min**. Dejan's entire top ten runs 5:29–14:45; ControlCase's real winners are 7–10 min while their 25–70 min webinars land under 1,700 views. Nothing past 40 min without a named guest.
4. **The Room is now conditional.** It runs only when the guest's employer is a name a buyer recognises. Summit 7's *Boeing* episode was the fastest-accelerating video in the whole set; Dejan's peer-consultant interviews (43 and 60 min) are near the bottom of his top fifty. Same format, opposite outcome — the guest is the variable. His one CEO-framed video is his weakest at 22,885.

Also corrected: video 07 in the launch slate targets **iso 42001 explained**, which is **below the 750/mo measurement floor**. Retarget to **iso 42001 implementation** (4,933/mo, competition 10.2) before scripting.

Other standing YouTube findings

- **The career-intent trap.** Francois B. Arthanas has 16,700 subs of job-seekers and cannot get 1,200 views on the thing he sells. ~21,600/mo of the ISO 27001 cluster is CV-building demand. Chasing the biggest numbers builds the wrong audience.
- **Shorts.** Stuart Barker's 388 Shorts/yr produced ~975 views each vs ~11,928 for his 32 long videos. Shorts are the reach/clip layer with a long-form CTA — never the website, never the strategy.
- **Never publish a recorded webinar.** ControlCase, seven of them, 647–1,641 views each on a channel averaging 36,822.

Claims marked DO NOT USE (from the claims library)

- "40% of cyber insurance claims denied" — unsourced
- Any dollar size for the vCISO market — no credible source
- Current TOGAF/COBIT adoption rates — no data exists
- "ISO 27001 certifications doubled" — methodology artifact
- Any "we reduce audit cost/time by X%" — no baseline measured
- Any client count or unnamed-client logo — no verifiable number, no consent
- CMMC as live/enforced — Phase II suspended 13 Jul 2026; 800-171 + DFARS 7012 still apply. Re-verify before any DIB campaign.
- vidIQ growth percentages as precise magnitudes — the metric is banded (−45.8% and +84.5% recur across unrelated terms). Direction and rank order only.
- Veteran-Owned Small Business — in the 2024 deck, on no current public page. Verify VOSB vs SDVOSB and SBA registration before any public use.

Decisions only Andrew can make (blocking)

1. **Publish pricing or not.** Buyers explicitly reward transparency; nobody in the category does it. Blocks the one-pagers, the website, and slate video 08. **Double-flagged:** Stuart Barker's "ISO 27001 Certification Cost Explained Simply" is 30× his library average.
2. **3HUE ↔ AiVRIC naming.** Endorsement, powered-by, or separate. Boilerplate drafts powered-by. Note v3 has already decided the *channel* question: AiVRIC walkthroughs run on the 3HUE channel; the naming lockup is still open.
3. **Who owns distribution.** Company page 577 followers, no visible posts; Andrew's profile 2,003 followers and all the reach.
4. **Veteran-owned status** — a records question, not a marketing call.

The blocking dependency, unchanged

3hue.net and www.3hue.net still serve two different websites. No sitemap, no canonical tag, no JSON-LD. The homepage still advertises "Now accepting Q2 2026 Snapshot engagements" — stale since 30 June — and the CTA goes straight to

Calendly with no landing page, no form and no UTM capture. **Week 1 of the rollout is the site, not the studio.** Diagnosed in Feb 2024, re-diagnosed in the 2026 GTM deck, still live.

Access used (what works)

- LinkedIn, X, TikTok: logged-in sessions in the Claude browser pane on Nate's Mac.
 - Reddit: blocked in WebFetch and the browser pane; works through Claude in Chrome.
 - Live site CSS/assets: extracted via Claude in Chrome `javascript_tool` (long base64 output is blocked; screenshot with `save_to_disk` works and lands in the container).
 - **vidIQ MCP** — keyword research, channel search/stats/videos, title scoring. **Credits exhausted 9 Sept 2026.** Top up before further pulls.
 - Playwright/Chromium available in the container for rendering local HTML.
-

Still missing (would convert judgment into fact)

- **Won-lost history** tagged by segment/trigger/size — highest value; would confirm or overturn the 60/25/15 split. Validation method: re-score 20 closed deals against the fit model; if tiers don't separate wins from losses, move the weights, not the definitions.
- **Search Console + Analytics** for 3hue.net — 15-minute task, currently blocks all website measurement. Do before the landing page ships.
- LinkedIn page analytics; Sales Navigator for territory sizing.
- Asset gaps: no vector logo master, no compact/knockout/stacked lockups, no trust page, no published slide or proposal template.
- **Two vidIQ pulls that did not complete** (credits): the regulatory-reaction cluster (EU AI Act, DORA, NIS2) and buyer-intent terms (security questionnaire, third-party risk). **The Filing franchise is unquantified until these run.**

- **Re-pull the six crossover terms weekly.** One week is not a trend; the ISO 42001 finding needs a third and fourth data point before it drives a year of production.
