

The Handoff

What the marketing leader's two strategy documents contain, how they line up against the research already done, and the one thing in them that matters more than everything else: **a website diagnosis made in February 2024 that is still accurate today.**

SOURCE 1 · 37 PAGES

3HUE Marketing Strategy & Site Recommendations 2024

By Pablo Alvarez. Business overview, tone & voice, personas, consumer journey, SEO, email, social, and a page-by-page website audit with a Semrush export.

SOURCE 2 · 17 SLIDES

3HUE 2026–2027 GTM & Marketing Strategy

Marked confidential draft for leadership discussion. Self-described as rebuilt from the 2024 deck plus a current website review.

01 The standing diagnosis

Buried on page 36 of the 2024 deck is a Semrush export dated 29 February 2024. It is the most valuable page in either document, and not for a good reason.

The 2024 figures are read directly from the Semrush screenshots in the source deck. The September 2026 column was verified against the live site on 4 September 2026 by fetching both hostnames.

MEASURE	29 FEB 2024	4 SEP 2026	STATUS
Organic search traffic	0	still not ranking for the company name	unchanged
Organic keywords	2	page one for "3HUE" is Crunchbase, ZoomInfo, D&B, BBB	unchanged
Authority Score	2 ↓	—	not re-measured

MEASURE	29 FEB 2024	4 SEP 2026	STATUS
Backlinks / referring domains	155 / 33	—	not the bottleneck
Site health	87% · 39 pages 11 errors · 241 warnings	—	not re-measured
Indexation basics	4 pages returning 4XX 19 pages with no h1	no sitemap.xml · no canonical no og:url · zero JSON-LD	worse
One site or two	one	apex and www serve different sites	new failure
Availability copy	—	"Now accepting Q2 2026 Snapshot engagements"	stale since 30 Jun

The two headlines live today, at two spellings of the same domain:

3hue.net

"Enterprise AI needs a governing layer. We build it."

www.3hue.net

"My Organization needs..." — Virtual Chief Digital Officer, Virtual CIO. No mention of AI governance anywhere on the page.

The GTM deck names the fix precisely — *"Highest-priority fix: remove/update dated availability language such as Q2 2026 and make all CTAs current"* — and that exact string is still on the homepage. There is also no landing page behind the primary call to action: **"Book the AI Snapshot" goes straight to Calendly**, so there is no form, no UTM capture into the CRM, and no qualification before someone holds time on Andrew's calendar.

The honest read. This is not a research gap. Two separate consultants, two and a half years apart, found the same problem and wrote it down. What is missing is not analysis — it is an owner, developer time, and a date. Every channel plan any of us writes inherits this, because every plan eventually points at the website.

02 **Six things we didn't know**

These are facts present in the handed-over documents and absent from every public source I researched. Each one changes something.

01

3HUE is a Veteran-Owned Small Business

The 2024 deck states it plainly on the About Our Company slide, alongside "Founded in 2015" and "2020 Go-To-Market". It appears on no current page of 3hue.net, in no third-party listing I found, and in none of the eight documents we have built. For the regulated and federal-adjacent buyers in the ICP — and for supplier-diversity programs inside large enterprises — this is a qualification, not a nice-to-have.

ACTION

Confirm VOSB vs SDVOSB and current SBA registration before it goes anywhere public. Then it belongs in the site footer, the LinkedIn page, and the claims library.

02

There is a four-person on-camera bench

The GTM deck names the YouTube cast: **Andrew** on board-level AI risk, **Shay** on how AI changes incident response and monitoring, **Ariel** on Power Platform automation and where governance must lead, **Teriah** on turning business ideas into controlled AI use cases. This answers the one open question left in The Rollout.

ACTION

Already applied. The Rollout v2 adds a fifth franchise, The Bench, and closes the founder-dependency risk.

03

3HUE has published real prices before

The 2024 site carried "Starting as low as \$15 per endpoint" on the MDR page, with a \$15 EDR and \$45 XDR CTA pair, and named SentinelOne as the agent. The current site publishes nothing. The 2024 website was commercially more transparent than the 2026 one.

ACTION

Removes the "we don't publish pricing" objection to a published pricing architecture. There is precedent, and it was 3HUE's own.

04

The old quote form is a ready-made ROI model

The three-step "Get a Quote" flow collected user endpoints, server endpoints, AWS and Azure accounts, mobile devices, technology assets, vendors with access to sensitive data, physical locations, users, employees, admin users — plus yes/no on PCI-DSS, HITRUST, SOC 2, CMMC and HIPAA. That is a complete scoping input set, and it is 3HUE's own historical logic rather than something invented.

ACTION

Use it as the input model for the ROI calculator still on the build list, instead of designing one from scratch.

05

Named partners nobody is using

The 2024 material names SentinelOne as the EDR/XDR technology, Roar Technical Inspectors as a partner, "White Dog" as the whitepaper producer, and HubSpot's free tier as the email platform. None appear in current materials, and the LinkedIn company page had 211 followers at the time of the screenshot.

ACTION

Confirm which relationships are live. Partner logos and a co-marketing motion are among the cheapest credibility available.

06

Three public surfaces, two founding years

The site and the 2024 deck say founded 2015. BBB lists incorporation on 27 July 2015. The LinkedIn company About text, screenshotted inside the 2024 deck, says "established in 2017 and debuted its one-of-a-kind Virtual CIO managed services in 2020."

ACTION

Resolve before any "X years in business" claim ships. A buyer who checks two sources and finds two answers stops checking.

03 Where it all converges

This is worth stating plainly, because it is unusual. The GTM deck was written from the 2024 material and a website review. Our eight documents were written from public research, social listening and keyword data. Neither saw the other. They arrive at the same place on seven substantive calls.

Snapshot → Build → Operate as the offer architecture

= The Capability Map

An ICP defined by buying pain, urgency and readiness rather than demographics

= The Forcing Function

Buying triggers: board pressure, tool adoption, governance gap, customer assurance, audit pressure, shadow AI

= the trigger work

Channel jobs: Website converts · LinkedIn distributes · YouTube teaches · Email nurtures · Search gets you found = [The Rollout linking map](#)

"Measure pipeline quality, not vanity traffic" — with YouTube watch time explicitly demoted to a secondary health metric = [The Rollout 90-day KPI](#)

A 90-day shape: fix the site and messaging, then launch LinkedIn and the first YouTube batch, then run the campaign and report pipeline = [the 12-week rollout](#)

Case studies packaged five ways: web page, one-page PDF, LinkedIn post, short video, sales proof slide = [The Ship List](#)

What this is worth. Independent convergence is the strongest evidence available that the direction is right. It also means the marketing leader and this workstream are not competing plans — the GTM deck is the strategy at leadership altitude, and the eight documents are the execution layer underneath it. Say that out loud when you hand this back.

04 Four conflicts, resolved

Where the documents disagree, here is the call and the evidence behind it. All four are already applied.

A • How long should the videos be?

GT M DECK

"6–10 minute explainers."

THE DATA

ControlCase's long-form averages about 22 minutes — 19 uploads produced 4.1M views. Summit 7's averages about 16. The highest-velocity video in the entire competitive set is a 51-minute guest episode at 108.9 views per hour.

Resolved: length follows the franchise, not a house rule. 6–10 minutes is right for The Bench, where the job is one mechanism explained cleanly. 15–25 for The Snapshot and The Findings, 30–50 for The Room.

B • Are cybersecurity professionals a target audience?

2024 DECK

Lists "Cybersecurity Professionals" as a target audience, with broad category blog titles to match.

THE DATA

Practitioners searching YouTube are overwhelmingly career-intent, and every broad category term is contracting: cyber security –23.0%, cybersecurity –18.9%, information security –36.3%, ai ethics –45.8%.

Resolved: the GTM deck already corrects this by moving the ICP off demographics. Practitioners stay as an influence audience — people who recommend 3HUE — not a demand-generation target.

C • What still needs leadership approval?

GT M DECK

Slide 16 requests sign-off on four items: positioning and ICP, Snapshot-first CTA, the 90-day rollout, and website fixes.

REALITY

Andrew has explicitly delegated marketing direction. Three of the four are decided and documented.

Resolved: only the website fix still needs something from leadership — and what it needs is an owner and developer hours, not a marketing decision.

D • Is link-building the SEO priority?

2024 DECK

Recommends HARO/Connectively, prospecting, email outreach and the skyscraper technique.

THE DATA

The site already had 155 backlinks from 33 referring domains in 2024 — and zero organic traffic. Links were never the constraint.

Resolved: fix indexation first — one hostname, a sitemap, canonicals, structured data. Link-building is a later-order problem and wasted effort until a crawler can tell which site is the site.

05 What carries forward

The 2024 deck is two and a half years old and most of it has been superseded. These five pieces have not been, and re-deriving them would be waste.

The tone & voice framework

Eight attributes, and "Confidence without Arrogance" is the best line in either document. It survives intact into the brand standard.

The consumer journey map

Awareness → Consideration → Acquisition → Service → Loyalty, with real touchpoints named at each stage. Still the right spine for the nurture program.

The "Company & Culture" navigation

Our Story · Meet the Team · Careers · Contact, alongside Life at 3HUE · Partners · Awards & Certifications. The current site has no equivalent, and a founder-led firm needs one.

Non-LinkedIn social carries culture, not leads

Correct in 2024 and correct now. It saves the team from trying to make five platforms do demand generation.

The buyer-persona discipline

Keep the method — how they research, how they want to be reached, what they are measured on. Drop the demographic detail; "45–54, mostly male" is not a targeting instruction.

The GTM deck's buying committee

Risk · Executive · Finance · Tech · Operations, each needing the message translated. This is better than anything in our documents and gets absorbed into the message stack.

06 What changed in our documents

Applied today, not queued.

DOCUMENT	CHANGE	BECAUSE
The Rollout v2 published	Added a fifth franchise, The Bench — biweekly 6–10 minute practitioner explainers from Shay, Ariel and Teriah. Assigned presenters to all five franchises.	The GTM deck's named cast. Removes the founder dependency entirely.
The Rollout	Closed the open on-camera question; replaced it with an open <i>verification</i> item on veteran-owned status.	The question was answered by the handed-over material.
The Rollout	Reconciled runtime guidance and showed the peer evidence rather than just asserting a number.	Conflict A above.

DOCUMENT	CHANGE	BECAUSE
The Rollout	Week 1 now explicitly includes stripping the Q2 2026 strings, and the linking map flags that /ai-risk-snapshot does not exist — the CTA goes straight to Calendly.	Verified on the live site today.
ROI calculator not started	Will use the old quote form's input set as its scoping model.	Finding 04.
The Message Stack pending	Veteran-owned status and the buying-committee translation both belong in the claims library — one after verification, one immediately.	Findings 01 and section 05.

07 What to say back

A suggested reply to the marketing leader, in the order that respects the work:

1. The GTM deck holds up. Independent research arrived at the same offer architecture, the same trigger list, the same channel roles and the same "pipeline over vanity metrics" KPI stance. That is not a coincidence worth glossing over — it means the strategy is right and we can stop debating direction.

2. Two things in the handover we did not have and needed. The named on-camera bench unblocked the YouTube plan's single biggest risk. And the veteran-owned status may be the most under-used asset in the company — nobody outside these documents knows about it.

3. One thing needs an owner, not another document. The website was diagnosed as non-ranking in February 2024. The GTM deck re-diagnosed it and named the highest-priority fix. That fix is still not done, the site now serves two different companies at two spellings of the domain, and the homepage is advertising a quarter that ended in June. Nothing else in any plan compounds until this is fixed.

4. The ask. A name and a date against the website work. Everything else can proceed in parallel, and will.

Sourcing. All 2024 figures are read directly from the Semrush screenshots and slide content in 3HUE Marketing Strategy & Site Recommendations 2024 .pdf (37 pages). All 2026 strategy positions are quoted or paraphrased from 3HUE_2026_2027_GTM_Marketing_Strategy .pptx (17 slides), which is marked a confidential draft for leadership discussion and should not be treated as approved policy.

Live-site findings dated 4 September 2026 were verified by fetching <https://3hue.net/> and <https://www.3hue.net/> and reading the returned pages. Search-demand and competitor figures referenced here come from the vidIQ pull documented in *The Rollout*. Nothing in this document is estimated; where a 2024 metric has not been re-measured it is marked as such rather than assumed unchanged.

The veteran-owned status, partner relationships, founding date and any pricing precedent are reported here as they appear in the source documents. All four require verification against company records before external use.
