

3HUE Brand Sheet

The visual identity is read directly from the live sites — CSS custom properties, computed font stacks and the actual image assets. The usage rules, verbal identity and asset inventory are proposed standards, written because none existed.

MASTER LOGO

Logo-FULL-v1.avif · 2077 × 843 · transparent AVIF · 14 KB

TYPEFACES

Sora for display, IBM Plex Sans for body, both Google Fonts

BRAND COLOR

#44a8d9 — a single mid-cyan blue carries the whole system

DEFAULT APPEARANCE

Dark. The site ships dark-mode-first with a light theme behind a header toggle.

01 The logo system

One master lockup plus three service marks. The marks are not decorative — each one is attached to a named managed-services offering on the homepage, which means the "three" in 3HUE has a concrete referent: security governance, operations, and technology governance.

Master lookup

Numerical "3" in brand blue with grey motion arcs, "HUE" in blue, "EXECUTIVE CONSULTING" in grey beneath. The arcs trail the 3 like a shutter trail — the only piece of visual metaphor in the identity.

/assets/img/logos/Logo-FULL-v1.avif

ISG

Audit-Ready Security Program. ISMS, ERM and incident-response foundations. Shield outline on a rounded navy tile.

/assets/img/isg-web-brand-logo-flat.png · 812×846

OPS

Managed Security Operations. Intelligence-driven identification and mitigation. Gear and circuit traces over a banded cylinder.

/assets/img/ops-web-brand-logo-flat.png · 720×720

ITG

Technology Governance for Scale. Architecture alignment and portfolio governance. Hexagon with connected nodes at the vertices.

/assets/img/itg-web-brand-logo-flat.png · 720×720

Asset notes. The master logo is a transparent AVIF at 2077 × 843 — it sits cleanly on the dark site, and the light-grey field you see behind it above is the viewer backdrop, not part of the file. No SVG or vector master surfaced at the expected paths, and no white/mono/stacked variants were found. The three service marks are flat PNGs with the navy tile and glow baked in, so they carry their own background and cannot be recolored or placed on a light surface without the tile coming along.

02 Color

Read from the :root custom properties on 3hue.net. The system is deliberately narrow: one brand hue with a dark and light step, two greys, and a four-step surface and ink ramp that

inverts between themes.

BRAND

 Brand primary #44a8d9 Buttons, logo, focus ring, card borders	 Brand 700 #2f86b3 Links on light surfaces	 Brand 100 #d9eff8 Tints, badge fills
 Secondary #666666 "Executive Consulting" wordmark, logo arcs	 Accent #999999 Tertiary grey	

DARK SURFACES & INK – THE DEFAULT APPEARANCE

 Surface 0 #0b1118 Page background	 Surface 1 #0f172a Cards, raised panels	 Surface 2 #111827 Secondary fills
 Surface 3 #1f2937 Wells, dividers	 Ink strong #f8fafc Headings	 Ink default #e2e8f0 Body copy
 Ink muted #cbd5f5 Secondary copy	 Ink subtle #94a3b8 Captions, labels	

LIGHT SURFACES & INK – BEHIND THE TOGGLE

Contrast — where the palette works and where it doesn't

FOREGROUND	ON	RATIO	WCAG AA	VERDICT
#44a8d9 brand	#0b1118 dark	7.09:1	Passes AA and AAA	The brand hue is built for the dark theme.
#0b1118 ink	#44a8d9 button	7.09:1	Passes AA and AAA	Primary button is solid.
#e2e8f0 body	#0b1118 dark	15.38:1	Passes AAA	Dark-theme body copy is excellent.
#94a3b8 subtle	#0b1118 dark	7.39:1	Passes AA and AAA	Captions hold up.
#44a8d9 brand	ffffff light	2.68:1	Fails, all text sizes	Never set brand blue as text on white. Use it as a fill only.
#2f86b3 link	ffffff light	4.05:1	Fails body, passes large	The light-theme link color is just under the 4.5:1 bar. Darkening to about #2A7AA3 clears it.

FOREGROUND	ON	RATIO	WCAG AA	VERDICT
#999999 accent	#ffffff light	2.85:1	Fails, all text sizes	Decorative only.
#666666 secondary	#ffffff light	5.74:1	Passes AA	Safe for the wordmark and small print.

Ratios calculated to WCAG 2.1 relative luminance. AA requires 4.5:1 for body text and 3:1 for large text (18.66px bold or 24px regular).

03 Typography

Two families, cleanly split: Sora does every heading, IBM Plex Sans does everything else. Both are open-source Google Fonts, so there is no licensing friction in decks, documents or client deliverables.

Sora DISPLAY · HEADINGS

font-family: Sora, "IBM Plex Sans", sans-serif · weight 700

Enterprise AI needs a governing layer.

Aa **Aa** **Aa** **Aa**
Regular 400 SemiBold 600 Bold 700 — the site default ExtraBold 800

Live sizes on the homepage: h1 34.9px, h2 40px, h3 22px, all at weight 700, letter-spacing normal. A geometric grotesque with slightly squared bowls — it reads technical without going stencil or mono.

IBM Plex Sans BODY · UI · NAVIGATION

font-family: "IBM Plex Sans", "Helvetica Neue", sans-serif

We help regulated organizations decide where AI fits, what governance is required, and what must change before rollout accelerates. The same advisor who scopes the work delivers it.

Aa **Aa** **Aa** **Aa**

Regular 400 — nav Medium 500 SemiBold 600 — body Bold 700 — links

Base size 16px. Body paragraphs on the homepage compute to 13px at weight 600, which is small and heavy for running text — worth revisiting if readability ever comes up in testing.

04 Interface tokens

The shape language is soft and consistent: 12px on controls, 14px on cards, and a blue-tinted shadow that only appears on brand elements.

PRIMARY BUTTON

Book the Snapshot

background: #44a8d9
color: #0b1118
radius: 12px · weight 700 · 14px
shadow: 0 12px 26px

FOCUS & BORDERS

focus: 0 0 0 3px rgba(68,168,217,.5)
border subtle: rgba(148,163,184,.25)
border strong: rgba(148,163,184,.4)

05 Usage rules

No usage standard existed before this document, so the rules below are *proposed* rather than recorded. They are derived from how the assets actually behave — the minimum size comes from the point at which the logo measurably stops resolving, not from a convention. Adopt, amend or reject them, but write one of those down.

CLEAR SPACE

Keep free space on all four sides equal to the cap-height of the numeral 3. Nothing — no rule, image edge, or other logo — enters that zone.

MINIMUM SIZE

Full lockup: 160px wide on screen, 1.25in in print. Below roughly 120px the grey arcs behind the 3 fill in and "EXECUTIVE CONSULTING" stops resolving — which is

clear space = height of the "3"

what happens in the site header today at about 90px.

full lockup $\geq 160\text{px}$ / 1.25in
below that: needs a compact variant

BACKGROUNDS

Dark is the primary environment — brand blue clears AAA on #0b1118. On light surfaces the logo is fine as artwork; brand blue as *text* on white is not.

preferred: #0b1118 / #0f172a
acceptable: #ffffff / #f6f7f9
avoid: photography without a scrim

CO-BRANDING

3HUE leads, AiVRIC follows, separated by a hairline rule at 1× the clear-space unit, optically centered. Never overlap, never lock them into a single composite mark.

3HUE | AiVRIC
rule: 1px var(--bdr) at 1× clear space

Do not

DON'T	WHY IT MATTERS
Recolor the logo	There is no approved alternate colorway. Until a white or single-color knockout exists, any recolor is somebody improvising in a deck.
Stretch, rotate or skew	The arcs behind the 3 are the only piece of visual metaphor in the identity and they distort first.
Add shadows, glows or outlines	The system already carries one brand shadow, reserved for interface elements. The logo does not take effects.
Redraw or reconstruct the arcs	No vector master exists, so anyone needing a large version will be tempted to trace it. Commission a proper redraw instead — see Observations.
Use ISG, OPS or ITG as the company logo	They identify practices, not the firm. They never appear without 3HUE present somewhere on the surface.
Place the service marks on light backgrounds	They are flat PNGs with the navy tile baked in — the tile comes along and looks like a mistake.
Set body text in brand blue on white	2.68:1. Fails WCAG at every size. Fill only.

06 Verbal identity

A brand sheet that only covers the visual half leaves the more consequential half undefined — most people encounter 3HUE as words long before they see the logo. The voice below is described from Andrew's own published writing rather than invented, because that is the voice the market has already met.

Voice — three attributes

Practitioner, not vendor

Writes from having done the work, names specific failure modes, and is willing to say when something is not worth doing. Never sells from theory.

"This is the system I wish had existed when failure was not an option."

Direct, not hedged

Short declaratives. Takes a position and defends it. No "it depends," no "leverage synergies," no sentence that could have been written by any firm in the category.

"Tools do not reduce risk, decisions do."

Specific, not abstract

Reaches for the concrete artifact — an FDA 483, an MRA, a control that passed in December. Abstraction is where consultants hide and this voice does not.

"Governance without informed operational authority is theater."

Tone by context

CONTEXT	TONE	WATCH FOR
Website	Confident and plain. Short sentences, concrete commitments, a date or a number wherever one exists.	Drifting into abstraction. If a paragraph could sit on any competitor's site, it is not finished.
Founder posts on LinkedIn	First person, opinionated, one argument per post. A heretical opening line, then the reasoning.	Corporate voice creeping in. The company page can be neutral; his profile should not be.
Proposals and SOWs	Precise and unambiguous. Scope, dates, deliverables, what is explicitly out of scope.	Overpromising. Never imply a guaranteed audit outcome.

CONTEXT	TONE	WATCH FOR
Regulated and examiner-facing	Formal, framework-named, traceable. This is the one context where the acronyms belong up front.	Informality. The register that works with a SaaS founder reads as unserious to a CRO.
Incident or bad news	Immediate, factual, no hedging. What happened, what is known, what happens next, when the next update comes.	Anything that sounds like it went through legal three times. This is a firm that sells accountability.

Naming conventions

NAME	CORRECT FORM	NEVER	NOTES
Company, short	3HUE	3Hue · 3hue · 3-HUE	All caps, no space, no hyphen. Matches the logo and the site.
Company, legal	3HUE Executive Consulting LLC	—	Contracts, invoices, legal notices only.
Platform, short	AiVRIC	AIVRIC · Aivric · aiVRIC	Capital A, lowercase i, then all caps. The lowercase i is deliberate and is the most commonly broken rule in the family.
Platform, legal	AiVRIC Technologies, Inc.	—	Delaware entity.
Practices	ISG · OPS · ITG	Standalone brands	Always expand on first use: ISG (Audit-Ready Security Program), OPS (Managed Security Operations), ITG (Technology Governance for Scale).
Products	CloudSignals+RiskOps	Dropping the module name	Only CloudSignals is generally available. Everything else is qualified as in development, in writing, every time.

Unresolved, and it needs a decision. How 3HUE and AiVRIC appear together in a sentence is not settled anywhere: endorsement ("AiVRIC, from 3HUE"), powered-by ("3HUE managed programs, running on AiVRIC"), or full separation. The Message Stack drafts boilerplate using powered-by as the most defensible reading today. Once Andrew decides, the answer belongs here as a rule, and the three self-descriptions currently live on the website, LinkedIn and the BBB profile should be reconciled to match.

07 In context

The homepage header as it renders today: an eyebrow bar carrying the positioning line and social icons, the logo at small scale, a light nav, the dark-mode toggle, and the primary CTA in brand blue.

3hue.net, captured September 2, 2026. Note the logo renders at roughly 90px wide — at that size the grey motion arcs behind the "3" begin to fill in and the "EXECUTIVE CONSULTING" line is close to illegible, which is the argument for a compact or mark-only lockup.

08 Asset inventory

What exists, what does not, and what to commission first. Everything marked missing was checked for at the expected paths and in the live pages — absence here means it was not found, not that it does not exist somewhere on a drive.

ASSET	STATUS	WHERE / WHAT'S NEEDED	PRIORITY
Master logo, raster	Exists	/assets/img/logos/Logo-FULL-v1.avif — 2077×843, transparent	—
Master logo, vector	Missing	No SVG, EPS or PDF found. Caps print, signage and large format; forces a quality decision at every resize.	High
Compact / mark-only lockup	Missing	Needed for favicons, avatars, app icons and the site header, where the full lockup currently renders below its legible size.	High
Knockout (white / single-color)	Missing	Required for dark photography, merchandise, one-color print and partner co-branding.	Medium
Stacked lockup	Missing	For square and vertical placements — social profiles, event banners, badges.	Medium
Service marks (ISG / OPS / ITG)	Exists, limited	Flat PNGs with the tile baked in. Transparent SVG versions would make them usable in decks, proposals and documents.	Medium

ASSET	STATUS	WHERE / WHAT'S NEEDED	PRIORITY
AiVRIC logo	Exists	/assets/images/logo/aivric.svg — a true vector master	—
Slide template	Unknown	Not publicly discoverable. If none exists, this is the highest-frequency branded surface in a consulting firm and the most common place identity breaks down.	High
Proposal / SOW template	Unknown	Should carry the brand, the boilerplate and the standing scope language.	High
One-pagers per offer	Missing	Snapshot, SOC 2 readiness, managed program, portfolio assurance. Covered in the go-to-market playbook.	High
Case studies with metrics	Partial	Three stories published with strong outcomes but no client quotes, no timeframes and no named references.	High
Social templates	Missing	LinkedIn single-image and carousel frames in brand, so founder posts stop looking unbranded.	Medium
Email signature	Unknown	Cheap, high-frequency, and usually the first place a wrong logo file appears.	Low
Trust page / security page	Missing	A firm selling provability that cannot demonstrate its own posture publicly. Also the single most requested artifact by the Hue 01 buyer.	High

If only three get commissioned: the **vector master** (it unblocks every other asset), the **slide template** (highest-frequency surface), and the **trust page** (it is both a marketing asset and a proof point that 3HUE practices what it sells).

09 AiVRIC, the sister brand

AiVRIC master logo

Shield containing a rising chart, "Ai" in blue, "VRIC" in near-black. Delivered as SVG — a true vector master, which 3HUE does not appear to have.

/assets/images/logo/aivric.svg · 300×63

Product palette

Cyan #00d1ff, green #2ee59d, gold #ffd63a, purple #a78bfa, red #ff3b5c on near-black #080f1c — a severity-coded console palette, appropriate for a risk product.

--ve-* and --hp-* custom properties

Jost

+ Inter

Type

Jost at weight 900 for headings, Inter for body — a different pairing from 3HUE's Sora and IBM Plex Sans. Built on Bootstrap 5, so the base component set is Bootstrap's.

Jost, sans-serif · Inter, sans-serif

10 Observations

Seven things worth a decision. None of them are broken; several are the ordinary drift of a brand that grew a product alongside a consultancy.

The name promises three hues; the palette has one

The identity is monochromatic — a single blue plus greys. The "three" lives in the ISG, OPS and ITG marks, but all three are rendered in the same blue on the same navy tile, so the trio reads as one thing repeated rather than three distinct practices. Assigning each service a distinguishable hue would make the name do work it currently doesn't, and would give marketing a way to color-code offers, decks and proposals.

Two different blues across the family

3HUE's brand blue is #44a8d9, a soft mid-cyan. AiVRIC's interface runs on #00d1ff, an electric cyan roughly twice as saturated. The AiVRIC *logo*, meanwhile, uses a blue close to 3HUE's — so the logo and its own product interface disagree, and the family reads as two brands rather than a parent and its platform. Picking one anchor blue, or a deliberate parent-and-product relationship, is a half-day decision with a long payoff.

No vector master for 3HUE

AiVRIC ships a real SVG. 3HUE's master is a 2077 × 843 raster AVIF, and no SVG, EPS or PDF variant surfaced. That caps print, signage, embroidery and large-format use, and it means every resize is a quality decision. Commissioning a vector redraw of the existing mark is cheap and unblocks everything downstream.

Missing logo variants

No white or single-color knockout, no stacked lockup, no mark-only version. At the 90px the header uses, the arcs behind the "3" close up and the consulting line stops resolving. A mark-only favicon-scale asset and a stacked version for square placements would cover the cases the current file cannot.

The service marks carry their own background

ISG, OPS and ITG are flat PNGs with the navy tile, gradient and glow baked in. They cannot be placed on a light surface, recolored, or used at small sizes without the tile. Transparent SVG versions would make them usable in documents, proposals and slides — which is where they would earn the most.

Two contrast failures in the light theme

Brand blue on white is 2.68:1 and fails at every text size; the link color #2f86b3 is 4.05:1, just under the 4.5:1 body-text bar. The dark theme has no such problem — brand blue clears AAA on the dark ground. Since the site defaults to dark this is largely latent, but it will surface in any light-background PDF, email or print piece. Darkening the link step to roughly #2A7AA3 resolves it.

A token named for the wrong color

AiVRIC's stylesheet overrides Bootstrap's `-bs-red` to #09D3FB, a cyan. Anything Bootstrap renders through its danger or red channel will come out cyan, which is a subtle trap for whoever maintains it next — and a genuine usability risk on a product whose job is signalling severity. Worth renaming to a custom token and restoring red to red.

Extracted live from 3hue.net and aivric.com on September 2, 2026 via computed styles, CSS custom properties and the source image assets. Logo images are reproductions of 3HUE and AiVRIC assets, shown

here for internal brand reference. Contrast ratios computed to WCAG 2.1.
