

3HUE YouTube Data Book

Every usable figure from the vidIQ pulls, consolidated — keyword demand by cluster, competitor benchmarks, video-level evidence, and what each number actually licenses you to conclude.

Pulls: 2 Sep, 3 Sep, 9 Sep 2026 Source: vidIQ MCP Market: US-weighted
Status: credits exhausted 9 Sep — see gaps Copy: offline · self-contained · no network needed

HOW TO READ THIS

Reading key

vidIQ returns several different measures that are easy to conflate. They are not interchangeable.

Volume Estimated monthly YouTube searches. Anything reported as <750 is below vidIQ's measurement floor — treat as zero.	Competition 0–100. How many videos already target the term. Under 15 is genuinely open; over 30 is crowded.
Overall vidIQ's blended opportunity score. Useful for ranking within a cluster, not across clusters.	Growth % vidIQ's <i>own</i> current-vs-baseline measure. Its baseline window is not disclosed and moves between pulls.
Week Δ Our own 2 Sep → 9 Sep comparison of the volume figure. Independent of vidIQ's growth %.	VPH / Breakout Views per hour since publish, and vidIQ's over-performance score vs. the channel's own norm. Breakout > 30 is a genuine outlier.

ONE CAVEAT THAT APPLIES EVERYWHERE

Several unrelated terms return identical growth figures (-45.8% appears three times; +84.5% appears four times across separate pulls). That strongly suggests vidIQ bands its growth metric rather than reporting a continuous value. **Trust the direction and the rank order; do not quote the magnitude as precise.**

FINDING 01

The crossover: the market is trading a concept for a standard

Between the 2 September and 9 September pulls, the abstract AI-governance vocabulary fell and the concrete standard vocabulary rose. One week is not a trend, but the direction is consistent across five of six terms and it matches what the video-level data shows on Dejan Kosutic's channel.

AI governance keyword cluster, 2 Sep → 9 Sep 2026
estimated monthly YouTube searches · same scale for all rows

WHAT THIS LICENSES

Stop titling videos "AI governance." Start titling them "ISO 42001." The concept term is 2.7× bigger but falling and sits at competition 42.1; the standard term is rising, sits at 23.1, and its best sub-term (iso 42001 training, competition 8.5) carries the highest opportunity score of any term in the entire research set — 71.0.

This does not change 3HUE's positioning. The site can keep saying "enterprise AI needs a governing layer." It changes what goes in the title bar, which is a different decision made by a different audience.

AI governance & ISO 42001

The strategic centre of the channel. Figures from the 9 Sep pull where available, 2 Sep otherwise.

ISO 42001 cluster – highest-opportunity territory in the whole set				
TERM	VOL/MO	COMP	OVERALL	GROWTH
iso 42001	17,487	23.1	68.8	+84.6% vs baseline 9,475
iso 42001 training	6,946	8.5	71.0	—
iso 42001 implementation	4,933	10.2	69.0	—
iso 42001 certification	4,466	14.7	66.8	—
iso 42001 lead implementer	3,961	11.9	67.5	—
iso 42001 explained	<750	18.4	32.6	below floor
iso 42001 standard / roadmap / requirements / clauses explained / aims	<750	6–25	30–37	all below floor

AI governance cluster – larger, harder, and cooling				
TERM	VOL/MO	COMP	OVERALL	GROWTH
ai governance	47,568	42.1	65.1	–34.0% (was –25.2% on 2 Sep)
ai compliance	6,038	22.0	65.1	+84.5%
responsible ai	5,129	43.3	55.9	–62.1%
ai governance explained	5,248	28.1	62.1	—
ai governance framework	4,322	33.3	59.2	–30.1%
ai risk management	4,193	29.5	60.6	flat
ai regulation	3,306	49.5	51.7	US volume 20,250
artificial intelligence governance	3,985	19.5	64.4	—
ai management system	<750	34.6	26.2	below floor

NOTE ON THE US SPLIT

ai governance is 40–42% US — about **19,000 US searches a month**, still the largest single US term in the set. It is not worthless; it is just expensive to rank for and pointed the wrong way. Use it in descriptions and tags, not in titles.

Question-intent terms

vidIQ's question index — how people phrase the search when they are looking for an answer rather than a category. These map almost one-to-one onto video titles.

AI governance questions (2-3 Sep pull)				
QUESTION	VOL/MO	COMP	OVERALL	INTENT
what is ai governance	13,131	44.0	—	definition
why ai governance is becoming essential	7,463	15.2	68.6	+84.5% · buyer

who owns ai governance	5,019	24.1	—	the 3HUE thesis
how to break into ai governance	4,986	17.7	—	career
how to learn ai governance	4,972	25.9	—	career
how to do an ai governance audit report	4,968	5.0	71.1	lowest comp found
how to establish an ai governance framework	4,962	14.3	67.4	practitioner
what is ai data governance	4,191	16.0	—	adjacent

SOC 2 questions (2 Sep pull)			
QUESTION	VOL/MO	COMP	NOTE
what is soc 2 compliance?	5,303	9.6	definition
what is soc type 2 for cyber security	4,835	5.3	same question, worse grammar, less competition
how soc 2 fosters ai governance	4,749	23.2	bridges both pillars
how to get soc 2 certification	4,543	5.0	buyer
why soc 2 is bullshit	4,533	27.5	contrarian demand is real
why does soc 2 feel like security theater	4,463	36.5	the "paper maturity" thesis, verbatim
how to pass soc 2 audit	4,438	6.9	buyer
how to get soc 2 certification super fast	4,056	21.8	urgency = live trigger
how to build soc 2 ready fintech systems	4,039	23.5	vertical
what to look out for when reviewing a soc 2 type 2 report	3,946	5.9	PE / diligence ICP
how long does iso 27001 take after soc 2	3,914	5.3	sequencing
how long soc 2 really takes	3,536	23.3	timeline
how to get your saas soc 2	3,436	6.6	anchor ICP

THE HIGHEST-VALUE ROW IN THE WHOLE DOCUMENT

what to look out for when reviewing a soc 2 type 2 report – 3,946 searches a month at competition **5.9**. That is a private-equity operating partner or an enterprise procurement lead, on the buying side of the table, with almost nobody answering them. It is also exactly the second ICP in the Maturity Gap research. Make this video first.

CLUSTER 03

SOC 2 head terms

TERM	VOL/MO	COMP	OVERALL
soc 2	8,352	26.8	64.4
soc 2 explained	6,476	8.3	70.8

soc 2 type 2	3,700	9.3	68.2
soc 2 certification · requirements · cost · vendors · software · program · definition · soc 1 vs soc 2	<750	7-19	32-37

THE PATTERN TO EXPLOIT

Every SOC 2 term that includes an *explanatory* word — explained, checklist, audit, report — sits at single-digit competition. Every term that includes a *transactional* word — certification, cost, vendors, software — is below the measurement floor. People come to YouTube to understand SOC 2, and go to Google to buy it. Build the channel for the first behaviour and let the site handle the second.

ISO 27001 & NIST

ISO 27001 carries 2.4× SOC 2's volume, but read the sub-terms before celebrating: the demand is dominated by people who want a certification for their CV, not a program for their company.

TERM	VOL/MO	COMP	INTENT

READ THIS BEFORE ANYONE PROPOSES A "CYBERSECURITY CHANNEL"

Every broad category term in this table is falling, most by 20–45%. The channel's growth has to come from specific standards and specific buyer questions, not from the category. That is convenient, because specificity is also where the competition scores collapse.

BENCHMARKS

Channel benchmarks

Every channel sampled across both pulls, sorted by subscribers. "Avg" is lifetime views ÷ videos — a blunt but comparable measure of whether a library actually gets watched.

CHANNEL	SUBS	VIDEOS	AVG VIEWS	SUBS 1Y	WHAT IT IS
Dejan Kosutic	426,000	1,344	6,978	+598%	ISO 27001/42001/NIS2/DORA consultant selling toolkits + courses. The model.
UnixGuy	322,000	249	62,838	+19%	Cyber careers — adjacent, not a competitor
Prabh Nair	185,000	710	18,326	+28%	GRC certification education

Responsible AI Studio	1,190	279	—	+268% views	101 long/yr → ~810 views each

THE RANGE IS THE POINT

This niche supports channels from 1,000 to 426,000 subscribers. Two firms that sell exactly what 3HUE sells — ControlCase and Summit 7 — are at 143K and 158K. Two that publish constantly and get nothing — SecureGovernance at 159 average views over 199 videos, Responsible AI Studio at ~810 over 101 a year — prove that output alone is not the mechanism.

Dejan Kosutic — 426K subscribers, and the biggest surprise in the data

The largest channel in the niche and the closest strategic analogue to what 3HUE + AiVRIC could be: a named consultant selling documentation toolkits and software (Advisera / Conformio) off the back of free standards education. His top 50 long-form videos, pulled 9 September.

Product videos are his single best-performing format

5 of his top 6 videos are product overviews

THREE THINGS THIS OVERTURNS

1 • Product content is not a tax on the channel – it is the channel. His #1, #2, #3, #4 and #5 videos are all product walkthroughs, together carrying 2.9M views. This is a direct upgrade for "The Stack" (AiVRIC): it should be a front-line series, not a supporting one. The framing that works is *"How does it work? [product overview]"* – a demonstration, not a pitch.

2 • The interview format underperforms on the largest channel in the niche. His two long consultant interviews (60 and 43 minutes) sit near the bottom of his top-50 at 31K and 59K, against a channel median far higher. And the one explicitly CEO-framed video – *"What CEOs need to know about ISO 27001?"* – is his weakest at 22,885. That is the third independent data point against making CEO's Corner the flagship.

3 • ISO 42001 works right now. He entered the topic in late 2025 and every one of six videos cleared 58,000 views, with the flagship carrying a 142.5 breakout score. The window is open and 3HUE has a real claim to it.

Summit 7 — the seven-part playbook

158,000 subs · 635 videos · 7,023,964 views · avg 11,061 · **+170% subs**, **+100% views** in 12 months. A consulting firm selling CMMC services to defence contractors. Only 5 long uploads in the trailing year, yet 3,332,632 long-form views in that window. Long-form average duration: 946 sec (~16 min).

THE TRANSFERABLE HALF

Five of these seven translate directly to 3HUE: regulatory reaction (the AI-regulation news cycle, CMMC's suspension, DORA), a recurring monthly franchise, proprietary data from real engagements, the prediction/accountability pair, and customer story films. **The customer-story format is the one 3HUE is closest to being able to run and furthest from having** — seven films at 30K–123K views each, and 3hue.net currently carries no client quotes at all.

The two that do not transfer: Summit 7 owns a single regulator-defined market with a natural news cycle, and their guest was a named Boeing executive. 3HUE has neither yet.

ControlCase — the format experiment

143,000 subs · 161 videos · avg 36,822. A US compliance firm selling SOC 2, ISO 27001, PCI DSS and CMMC — the closest direct analogue to 3HUE's service line. They publish both short explainers and recorded webinars, which makes their channel a natural controlled experiment.

THE CAVEAT THAT STOPS THIS BEING OVER-READ

The huge explainer numbers are consumer-grade security topics — phishing, passwords, VPNs. They almost certainly convert nobody into a SOC 2 engagement. **Take the format lesson, not the topic lesson:** 7–10 minutes, plain English, one question per video, no slide deck. Then point that format at the buyer questions in §3 rather than at password hygiene.

The webinar evidence is the durable finding. Seven recorded webinars, none above 1,700 views, several under 700 — on a channel that averages 36,822. Do not put a webinar on the channel.

Stuart Barker — the closest model to 3HUE's actual size

10,600 subs · 1,332 videos · 1,342,379 views · avg 1,008 · **+99% subs in 12 months**. A solo ISO 27001 and SOC 2 consultant selling a documentation toolkit to startups. This is what year one and two realistically look like.

Clause 6.1.3 (Risk Treatment) and Pass Your Audit	9:46	2,231

TWO NUMBERS TO SET EXPECTATIONS WITH

The clause library averages roughly **1,000 views a video across 1,332 videos** and it sustains a real consulting business with a paid toolkit. Nobody at 3HUE should be disappointed by a few hundred views in month three.

And the ranking of his outliers is the content strategy in miniature: **contrarian > product > price > process**. His single biggest organic video is 2 minutes 21 seconds of telling people not to buy a category of software.

DEEP DIVE 05

The trap: Francois B. Arthanas

16,700 subs · 103 videos · 708,430 views. Founder of CyberProsAI, PhD scholar, sells an AI-governance cohort on Maven — positioned almost identically to what 3HUE would be on YouTube. His channel is the clearest warning in the entire data set.

WHAT PEOPLE ACTUALLY WATCH HIM FOR	—	VIEWS

The Truth about Cybersecurity — Your Company does NOT exist to be secure		299

VOLUME IN THIS CATEGORY IS CAREER INTENT, NOT BUYING INTENT

He built 16,700 subscribers out of job-seekers and cannot get 1,200 views on the thing his business is. The audience he assembled has no budget and no authority.

This is why the ISO 27001 numbers in §5 need reading carefully: lead implementer, lead auditor, training and certification account for roughly 21,600 of the cluster's monthly searches, and every one of those is someone building a CV. Dejan Kosutic can serve that demand profitably because he *sells courses*. 3HUE does not. **Chasing the biggest numbers in this niche builds the wrong audience.**

SYNTHESIS

Format rules the data supports

RULE	EVIDENCE	CONFIDENCE
Target 6–12 minutes	Dejan's entire top 10 falls between 5:29 and 14:45; ControlCase's winners 7:01–10:36; Summit 7's long-form average is 15:46	High — three channels, consistent
Never publish a recorded webinar	ControlCase: 7 webinars, all 647–1,641 views, on a channel averaging 36,822	High — controlled within one channel
Product walkthroughs belong at the front	Dejan: 5 of top 6 are product overviews, 2.9M views combined. Stuart: toolkit demos at 77,593 / 20,686 / 19,473	High — two independent channels
Long-form interviews underperform	Dejan's 60-min and 43-min interviews sit near the bottom of his top-50; his CEO-framed video is his weakest at 22,885	Medium-high — one channel, but decisive
Contrarian beats comprehensive	Stuart's #1 organic is 2:21 of "you don't need a GRC platform" at 102,401 — 100× his library average	Medium — one strong instance
Publish the price	Stuart's "Certification Cost Explained Simply" at 30,928 — 30× his library average	Medium — one instance, corroborated by search demand for cost terms on Google
React to regulation fast	Summit 7's six reaction videos: 28,833–297,798. ControlCase's CMMC pause videos carry breakout 10.7 and 34.4	High — two channels
Customer story films work	Summit 7: seven 1–3 min client films, 30,404–123,348 views each	Medium-high — one channel, consistent across seven
Shorts — contested, see §15	Dejan 527/yr → 426K subs. But Stuart's long-form beats his own Shorts ~12× per video	Low — the two notes disagree

SCORED

Title scores

vidIQ's click-through potential score, 0–100, long-form. The generic control was included deliberately.

SCORE	TITLE	WHY IT SCORES
96	Who Owns AI Governance? (Nobody — And That's the Problem)	question + contrarian answer; matches a 5,019/mo search
96	We Certified 1,000+ Systems at a Bank. Here's What Actually Fails an Audit.	proprietary number + stakes
96	The 10-Day AI Risk Snapshot: What We Find in Week One	named process + specific timeframe
95	Your Biggest Customer Just Sent a Security Questionnaire. Now What?	trigger moment, second person
91	Why Your SOC 2 Passed and Your Security Still Failed	paradox; the "paper maturity" thesis
84	AI Governance Best Practices for Enterprise Organizations	generic control — the most conventional B2B phrasing scores worst
82	How to Write an AI Governance Audit Report (Step by Step)	matches the 4,968/mo term at competition 5.0
78	ISO 42001 Explained for People Who Actually Have to Implement It	voice is good; "explained" sub-term is below floor

THE PATTERN

Specificity + stakes + a number beats category phrasing every time. The conventional enterprise-marketing construction — *"Best Practices for Enterprise Organizations"* — is the lowest score in the set despite being the phrasing most B2B teams default to.

Worth noting where score and search demand disagree: the 78-scoring ISO 42001 title uses `iso 42001 explained`, which is below the measurement floor, while `iso 42001 training` at 6,946/mo and competition 8.5 is unclaimed. A title can be well-built and still point at nothing.

HOUSEKEEPING

Corrections to the earlier notes

Reconciling research notes 04 and 05, which conflict in three places.

CLAIM	STATUS	CORRECT READING
"Shorts are the growth engine in this niche" (note 04)	Contested	Note 05 measured Stuart Barker directly: 388 Shorts/yr → 378,283 views (~975 each) vs 32 long/yr → 381,713 views (~11,928 each). Near-identical total views from 12× the output. Shorts buy subscriber growth and distribution, not efficient reach. Treat them as the LinkedIn clip layer, not the YouTube strategy.
Summit 7: "6 long videos in 12 mo → 577K views in 30d" (note 04)	Superseded	Note 05's deeper pull: 5 long uploads in the trailing year, 3,332,632 long-form views in that window, 635 videos lifetime, avg 11,061. Use these.
"CEO's Corner is not the flagship" (note 04)	Strengthened	Now supported by three independent data points, not one: ControlCase's webinars (647–1,641 views), Dejan's long interviews (31K–59K, bottom of his top-50), and Dejan's explicitly CEO-framed video at 22,885 — his weakest.
"The Stack (AiVRIC) — 2 per month, supporting role" (note 04)	Upgrade it	Dejan's five product overviews carry 2.9M views and are his top performers; Stuart's toolkit demos are his #2, #7 and #8. Product walkthroughs are a front-line series in this niche, not a supporting one.
"AI governance is what they discover once they're there" (note 04)	Reframe	Still true as positioning, but the search term is falling (~34%) while ISO 42001 is rising (+29% week-over-week). Title with ISO 42001; position with AI governance.
ISO 42001 absent from note 04 entirely	Add it	It is the highest-opportunity cluster in the research (top term overall score 71.0 at competition 8.5) and the only major term that is growing. It deserves a series slot.

LIMITS

What this data does not tell you

- **vidIQ credits are exhausted as of 9 Sep.** Two planned pulls did not complete: the EU AI Act / DORA / NIS2 regulatory-reaction cluster, and buyer-intent terms around security questionnaires and third-party risk. Both matter for the regulatory-reaction series — top them up before committing to that lane.
- **Search volume is not buying intent.** The Francois B. Arthanas case in §12 is the proof. Nothing in this data distinguishes a CISO from a job-seeker typing the same words, and roughly 21,600 monthly searches in the ISO 27001 cluster alone are visibly career-driven.
- **Growth percentages are banded, not continuous.** Identical figures recur across unrelated terms. Direction and rank order are reliable; magnitude is not.
- **One week is not a trend.** The crossover in §1 is directionally consistent across five of six terms and matches the video-level evidence, but it needs a third and fourth data point before anyone

bets a year of production on it. Re-pull the same six terms weekly.

- **No competitor conversion data exists.** View counts say nothing about whether ControlCase or Summit 7 closes business from YouTube. The customer-story films and sales-objection explainers imply they believe it does, but that is inference.
- **3HUE's own numbers are still missing** — Search Console, GA, CRM won/lost, LinkedIn page analytics. Everything here is inferred from competitors. That gap is unchanged from the Maturity Gap research.

Source: vidIQ MCP — keyword research, channel search, channel stats, channel videos, title scoring.

Pulls dated 2, 3 and 9 September 2026, US-weighted where noted.

Companion documents: research notes 04 (channel architecture) and 05 (raw data pull); artifact "The 3HUE Channel"; "The Maturity Gap" dossier for ICP and buyer language.

Figures are reproduced as the tool returned them. Where two pulls disagree, both are shown with their dates.
