

# The Rollout

A YouTube channel for 3HUE, the 12-week plan to launch it, and the map of how every video connects back to the site, LinkedIn, email, sales and AiVRIC. Built on **real search-demand data** and the measured performance of nine competitor channels — not on assumptions about what ought to work. **v2** folded in the 2024 marketing strategy and the 2026–2027 GTM deck; see *The Handoff* for the full reconciliation. **v3** adds a sixth franchise, refreshes the demand data against a second weekly pull, and revises two format calls that new competitor evidence contradicted — see *the Data Book*.

## PRIMARY LANE

AI governance  
operations & ISO  
42001

## CADENCE

1 long-form / week ·  
3 shorts / week

## FRANCHISES

Six · runtime follows  
the franchise

## LAUNCH

5 Oct 2026

## 90-DAY KPI

Qualified conversations — not views

## 01 The read

The obvious YouTube plan for a compliance advisory firm is to make videos about compliance frameworks and wait for buyers. The keyword data says that plan builds the wrong audience.

YouTube demand in this category is overwhelmingly *career* demand. People search "ISO 27001 lead implementer training" (8,118/mo), "how to break into AI governance" (4,986/mo) and "how to learn AI governance" (4,972/mo) because they want a job in the field. People with a budget and a deadline search differently, less often, and in far less crowded terms: "how to do an AI governance audit report" gets 4,968 searches a month against a competition score of **5.0 out of 100**.

The trap is real and it is visible in a live channel. François B. Arthanas is positioned almost identically to where 3HUE would sit — a credentialed founder selling AI governance advisory. He has 16,700 subscribers, earned almost entirely on CompTIA certification crash courses. His

top video has 190,553 views. His video explaining the NIST Cybersecurity Framework has 1,148. His video arguing the actual thesis he sells — *"Your Company does NOT exist to be secure"* — has **299 views**.

**The strategy in one line:** chase the smallest audience that can actually buy. A 400-view video watched by six heads of risk at regulated companies is worth more to 3HUE than a 40,000-view video watched by people studying for Security+.

There is one genuine tailwind, and a second pull a week later made it stronger. **ISO 42001 rose from 13,560 searches a month on 2 September to 17,487 on 9 September** — up 29% in seven days, at a competition score of 23.1, with the training, implementation and certification variants all sitting under 15. That is the same shape CMMC had before it created Summit 7, a 158,000-subscriber channel owned by a compliance consulting firm. The window is open now and it is not crowded yet.

**New in v3 — the crossover.** In the same seven days, *ai governance* fell from 55,887 to 47,568 and its growth reading went from -25% to **-34%**, while *ai compliance* nearly doubled (3,272 → 6,038) and *responsible ai* collapsed 45%. The market is trading an abstract concept for a concrete standard. The operating rule that follows: *title with ISO 42001; position with AI governance*. The site can keep saying "enterprise AI needs a governing layer" — that is a different sentence, read by a different person, in a different place.

## 02 Where the demand is

Every point below is a real keyword with real monthly search volume and a real competition score. The chart is the 2 September baseline pull; the movement table under it is the 9 September re-pull of the same terms. Read the chart left to right: the further left a term sits, the fewer people are already making that video.

● Operator intent — someone with a deadline ● Career intent — someone studying

● Category terms — too broad to convert

26 keywords, US-weighted. Two terms sit off the top of this chart and are excluded deliberately: ai governance (55,887/mo, competition 42.1) and iso 27001 (19,957/mo, competition 29.7) — both are category terms we are arguing against targeting head-on. Larger dots mark the terms that clear 4,400 searches at a competition score under 25: the buy zone.

| KEYWORD                                 | SEARCHES / MO             | COMPETITION | GROWTH            | INTENT   | WHAT WE DO WITH IT                                                                 |
|-----------------------------------------|---------------------------|-------------|-------------------|----------|------------------------------------------------------------------------------------|
| iso 42001                               | 17,487<br>13,560 on 2 Sep | 23.1        | +85%<br>▲ 29% w/w | operator | Anchor franchise. Own the implementation angle before the certification bodies do. |
| why ai governance is becoming essential | 7,463                     | 15.2        | +85%              | operator | The board-deck video. Something a risk lead forwards upward.                       |
| how to do an ai governance audit report | 4,968                     | 5.0         | —                 | operator | Lowest competition in the whole pull. Ship a template with it.                     |
| who owns ai governance                  | 5,019                     | 24.1        | —                 | operator | Literally the 3HUE thesis. This is our title, not a keyword we borrow.             |

| KEYWORD                                     | SEARCHES / MO           | COMPETITION | GROWTH            | INTENT   | WHAT WE DO WITH IT                                                                               |

| how to establish an ai governance framework | 4,962                   | 14.3        | —                 | operator | Maps to the 10-day AI Risk & Readiness Snapshot.                                                 |
| iso 42001 implementation                    | 4,933                   | 10.2        | —                 | operator | Clause-by-clause series. Batch-produced.                                                         |
| soc 2 compliance checklist                  | 4,685                   | 5.3         | —                 | operator | Downloadable checklist → the only gated asset we run.                                            |
| iso 42001 certification                     | 4,466                   | 14.7        | —                 | operator | Cost/timeline honesty video. Nobody publishes real numbers.                                      |
| iso 27001 implementation                    | 4,163                   | 12.0        | —                 | operator | Bridge content — the ISMS buyer is the ISO 42001 buyer in 18 months.                             |
| soc 2 audit                                 | 3,998                   | 7.3         | —                 | operator | Ties to the Transit Technologies zero-findings story.                                            |
| soc 2 type 2                                | 3,700                   | 9.3         | —                 | operator | Type I → Type II sequencing. Common, expensive confusion.                                        |
| ai compliance                               | 6,038<br>3,272 on 2 Sep | 22.0        | +85%<br>▲ 85% w/w | operator | <b>New in v3.</b> Fastest riser in the set. Use it in titles where "governance" would have gone. |
| iso 42001 training                          | 6,946                   | 8.5         | —                 | career   | High score, wrong audience. One video only, as a subscriber on-ramp.                             |
| iso 27001 lead implementer training         | 8,118                   | 15.9        | +85%              | career   | Skip. This is how you build an audience of job seekers.                                          |
|                                             |                         |             |                   |          |                                                                                                  |

| KEYWORD                               | SEARCHES / MO             | COMPETITION | GROWTH            | INTENT    | WHAT WE DO WITH IT                                                                                             |
|---------------------------------------|---------------------------|-------------|-------------------|-----------|----------------------------------------------------------------------------------------------------------------|
| soc 2 explained                       | 6,476                     | 8.3         | —                 | career    | Skip. Vanta and every GRC platform already own it.                                                             |
| what is ai governance                 | 13,131                    | 44.0        | —                 | category  | Skip. Definitional traffic that never books a call.                                                            |
| ai governance<br>(head term)          | 47,568<br>55,887 on 2 Sep | 42.1        | -34%<br>▼ 15% w/w | category  | Positioning language, not title language. Still ~19,000 US searches a month — use it in descriptions and tags. |
| responsible ai                        | 5,129<br>9,466 on 2 Sep   | 43.3        | -62%              | category  | Skip. Falling faster than any term in the set.                                                                 |
| ai ethics                             | 10,056                    | 50.0        | -46%              | category  | Skip. Declining and academic.                                                                                  |
| cybersecurity consulting              | 5,427                     | —           | -46%              | category  | Skip. The category itself is shrinking on YouTube.                                                             |
| vciso / virtual ciso / vciso services | <750                      | —           | —                 | no demand | Do not build a franchise here. There is no search audience.                                                    |

**Note the negatives.** Every broad category term in this space is contracting: cyber security -23.0%, cybersecurity -18.9%, risk management -26.7%, information security -36.3%, ai ethics -45.8%, and now responsible ai -62.1%. The only things growing are specific and operational — ISO 42001, "AI compliance", and "why AI governance is becoming essential". Generality is not a safe default here; it is a declining asset.

**One caveat on the growth column.** Several unrelated terms return identical growth figures — -45.8% appears three times and +84.5% four times across separate pulls. vidIQ appears to band this metric rather than report a continuous value. *Trust the direction and the rank order; do not quote the magnitude as precise.* And one week is not a trend: re-pull these six terms weekly before betting a year of production on the crossover.

### 03 Two channels, two outcomes

Both of these are real channels, measured this week. One is the model. One is the warning. The difference is not production quality or posting frequency — it is who they decided to talk to.

@summit7 · compliance consulting firm · CMMC

#### The model

158,000 subscribers, +170% in twelve months

5 long-form uploads in the trailing year

3.33M long-form views in that same year — the back catalogue carries it

~16 min average long-form runtime

297,798 views on "Primes Can't Waive CMMC" — a regulatory reaction video

108.9 views/hour on a guest episode with Boeing — their highest-velocity video

They sell services, not training. Every video answers a question a buyer has this quarter.

@francois-b-arthanas · AI governance founder · sells a cohort

#### The warning

16,700 subscribers — earned on CompTIA cert courses

190,553 views on his Security+ crash course

1,148 views on his NIST CSF 2.0 explainer

503 views on "The Harsh Reality of Cybersecurity"

299 views on the video stating his actual thesis

103 videos, 708,430 lifetime views, wrong audience

He built a training audience and now cannot reach it with the thing he sells.

| SecureGovernance      | GRC education                      | 4,140 | 199    | 159       | 118 long videos in a year, ~170 views each. The floor.                                   |

Channel metrics via vidIQ, 2–3 September 2026; Dejan Kosutic pulled 9 September. "Avg views" is lifetime views ÷ lifetime videos and understates channels with recent momentum.

@dejankosutic · consultant selling documentation toolkits and software

### What the biggest channel in the category actually publishes

876,030 "Advisera's NIS2 Documentation Toolkit — How does it work? [product overview]" · 11:01  
600,439 "Automating ISO 27001 Statement of Applicability with Conformio" · 8:23  
515,115 "Advisera's DORA Documentation Toolkit [product overview]" · 5:29  
499,394 "ISO 27001 Software for Small Businesses: Quick Overview of Conformio" · 7:18  
429,468 "Speeding Up ISO 27001 Risk Assessment: Conformio Risk Register" · 10:33  
202,750 "What is ISO 42001? Simple Explanation With Examples" · 8:41 · breakout score 142.5

Five of his top six are product walkthroughs — roughly 2.9M views. Product content is not a tax on this kind of channel; it is the channel.

@dejankosutic · the same channel, bottom of its top fifty

### And what underperforms on it

58,740 "Promoting Consulting Business Through Content Marketing | Interview | EP 5" · 43:07  
31,145 "How to Become a Successful Consultant | Interview | EP 1" · 1:00:26  
22,885 "What CEOs need to know about ISO 27001?" · 11:40 — his weakest

21,378 "NIS2 Gap Analysis Tool [free tool overview]" · 4:09

18,404 "What is Statement of Applicability (SoA)?" · 7:30

16,170 "How to implement ISO 27001 Annex A controls" · 8:21

Long peer interviews and CEO-framed titles are the two weakest shapes on the strongest channel in the category.

**Three things this channel settles. One** — product walkthroughs belong at the front of the channel, not linked out to another property. **Two** — his entire top ten runs between 5:29 and 14:45, which pulls the flagship runtime down from 15–20 minutes to 12–18. **Three** — he entered ISO 42001 in late 2025 and every one of six videos cleared 58,000 views, with the flagship carrying vidIQ's strongest over-performance score in the sample. The lane this plan picked in v2 is the right one, and someone larger has already proved it works.

## 04 The channel we're building

**Channel:** 3HUE — not AiVRIC, not a personal channel. But *AiVRIC product walkthroughs now live on this channel* rather than being linked out to another property; that is the main change in v3 and section 11 records why. The *face* on the channel is still Andrew, which is a separate question handled in the same section.

### Channel description (first two lines, which is all YouTube shows):

Governed AI and audit-ready security programs, explained by the people who build them. For risk, compliance and technology leaders at regulated and operationally complex companies.

Six franchises. Each one is a repeatable format with a fixed slot, so the team is never staring at a blank page — and each one is lifted from a pattern measured on a real channel, not invented.

### The Snapshot

weekly · 12–18 min · flagship  
Andrew, rotating

One governance problem, taken apart and put back together. Whiteboard or screen-share, no slides. Ends with the artifact — a template, a checklist, a control mapping — linked in the description. This is where the ISO 42001 and AI-compliance keywords live.

Trimmed from 15–20 in v3. Dejan Kosutic's entire top ten runs 5:29–14:45; ControlCase's own winners are 7–10 minutes. Depth still beats frequency — but not past about eighteen minutes.

### The Filing

event-driven · 10–20 min · within 72 hrs  
whoever knows the rule

A regulator, standards body or major buyer moves — we explain what it means by Friday. EU AI Act milestones, ISO 42001 amendments, SEC and FFIEC guidance, DORA deadlines, a named enterprise mandating a control in its supplier terms. Speed is the entire product.

Summit 7's four highest-view videos are all this format: 297,798 · 118,968 · 97,337 · 70,623 views.

## The Findings

monthly · 15–25 min · proprietary data  
Andrew + Shay

What we actually see across the programs we run. Anonymised and aggregated: the controls that fail most often, the questions that stall a questionnaire, what AiVRIC's checks flag across cloud estates. No client is named without written consent.

Summit 7's "100 CMMC Assessments — What We Now Know" (43,778) and "We Mapped 130 Iranian Cyber Attacks to CMMC" (49,949).

## The Walkthrough

biweekly · 6–12 min · product  
Shay or Ariel · **new in v3**

Show the tool doing the work. AiVRIC's continuous checks running against a real cloud estate, evidence assembling itself, an agentic remediation firing — and equally, the free tier, the Azure and Defender surface, and what a control map looks like when it is maintained rather than screenshotted. A demonstration, never a pitch. The house framing is the one that measurably works: "How does it work? [product overview]."

Dejan Kosutic's five product overviews carry ~2.9M views and are his top five videos outright. Stuart Barker's toolkit demos are his #2, #7 and #8 at 77,593 · 20,686 · 19,473. Two independent channels, same finding.

## The Room

monthly · 25–40 min · guest  
Andrew hosts · **conditional**

A conversation with someone who has been audited, breached, or asked to certify on a deadline. Practitioners over vendors: a bank's cloud governance lead, a PE operating partner, a Type II auditor. The guest's network is the distribution. **Only runs when the guest carries a name a buyer recognises** — see the gate below.

Summit 7's Boeing episode hit 108.9 views/hour, the fastest in the set. But Dejan Kosutic's two long peer-consultant interviews sit near the bottom of his top fifty at 58,740 and 31,145. The variable is the guest, not the format.

## The Bench

biweekly · 6–10 min · practitioner  
Shay · Ariel · Teriah

One mechanism, explained by the person who operates it. Shay on how AI changes incident response, access and monitoring. Ariel on where Power Platform automation helps and where

governance has to lead. Teriah on turning a business idea into a controlled AI use case. Short by design — one idea, no preamble.

Added in v2 from the GTM deck's named YouTube cast. This is the franchise that makes the channel survive a month when the founder is unavailable.

**On runtime — revised in v3.** v2 resolved the GTM deck's "6–10 minute explainers" by letting length follow the franchise, and that principle holds. What changed is where the ceiling sits. Dejan Kosutic's top ten — on the largest channel in the category — runs 5:29 to 14:45, and ControlCase's actual winners are 7–10 minutes while their 25–70 minute webinars land under 1,700 views each. *Six to twelve minutes for The Bench and The Walkthrough, twelve to eighteen for The Snapshot and The Filing, fifteen to twenty-five for The Findings where the data earns it, and twenty-five to forty for The Room.* Nothing goes past forty minutes without a named guest to justify it.

**The gate on The Room.** This is the one franchise where the evidence points both ways, so it runs conditionally rather than on a fixed monthly slot. Summit 7's 108.9 views/hour came from a *named Boeing executive* — a person whose title alone makes a defence contractor click. Dejan's interviews were with fellow consultants, and they underperformed his channel badly. The rule: *book the guest whose employer a buyer would recognise, or do not run the episode that month.* A peer-consultant conversation is a LinkedIn Live, not a flagship video.

Shorts run **three a week, cut from footage we already shot.** Their only job is reach and their only CTA is the long-form video — never the website. Stuart Barker's channel is the evidence: his Shorts averaged 975 views while his long-form averaged 11,928. Shorts are the top of the funnel, not the funnel.

## 05 The launch slate

Twelve videos, in publish order, plus the control case kept at the bottom. Titles were scored for click-through potential before selection; the scores below are measured, not estimated. Note what the scoring rewards — specificity, stakes and a real number — and what it punishes.

| #  | TITLE                                                        | CTR SCORE | FRANCHISE | TARGET KEYWORD         | SHIPS WITH                           |

|    |                                                                                     |           |             |                                         |                                   |

| #  | TITLE                                                               | CTR SCORE | FRANCHISE | TARGET KEYWORD           | SHIPS WITH                                 |
|----|---------------------------------------------------------------------|-----------|-----------|--------------------------|--------------------------------------------|
| 11 | The Controls That Fail Most Often (First 90 Days of Findings)       | —         | Findings  | iso 42001 implementation | Aggregate findings summary                 |
| 12 | [The Room — first guest episode, only if the guest clears the gate] | —         | Room      | brand                    | Guest's own clip pack                      |
| 13 | AI Governance Best Practices for Enterprise Organizations           | 84 x      | —         | —                        | <b>Cut.</b> Kept here as the control case. |

**Read row 13 against rows 1–4.** "AI Governance Best Practices for Enterprise Organizations" is the most conventional B2B title on the list and it scores below every specific one. "Who Owns AI Governance? (Nobody — And That's the Problem)" scores 96. The house rule that follows: *a title must name a person, a number, a moment or a consequence*. Category nouns strung together are not a title.

**Two title formulas worth stealing outright, added in v3.** Both are measured on live channels, both are repeatable, and neither is in use by anyone in the AI-governance lane yet.

**1• "What is [standard]? Simple Explanation With Examples."** Dejan Kosutic has run it three times: 579,513 on ISO 27001, 396,642 on the clauses, 202,750 on ISO 42001 — the last with a breakout score of 142.5, the strongest over-performance signal in the whole competitive sample.

**2• "[Thing] — How does it work? [product overview]."** His single biggest video, at 876,030. Plain, unglamorous, and it beats everything else he publishes.

One warning that cuts the other way: video 07 targets `iso 42001 explained`, which returns *under 750 searches a month* — below the measurement floor. The title is well built and points at nothing. Retarget it to `iso 42001 implementation` (4,933/mo, competition 10.2) before it is scripted.

## 06 The 12-week rollout

Nothing publishes until the destinations work. Four weeks of build, four weeks of launch, four weeks of proving the cadence holds. Dates are real.

**Week 1**

7–13 Sep

- **Fix the site first — this blocks everything.** 3hue.net and www.3hue.net currently serve two different websites; there is no sitemap.xml, no canonical tag, no og:url and zero JSON-LD. Every link in this plan points at a destination that does not resolve consistently. Redirect www → apex, publish a sitemap, add canonicals, add Organization and Person structured data. Strip every "Q2 2026" availability string — it has been stale since 30 June.
- Stand up the landing page the videos point to: /ai-risk-snapshot. One offer, one form, no navigation — *then* Calendly, so the booking is qualified and attributed instead of anonymous.
- Create the YouTube channel, claim the handle, set the description, banner and links. Verify the account so custom thumbnails and links unlock.
- Confirm the four-person on-camera bench and book the first shoot day into four calendars, not one.

**Week 2**

14–20 Sep

- Script videos 01–04 from the Message Stack. No new claims — every assertion must already exist in the claims library or come with a source.
- Build the four artifacts that ship with videos 01–04 (RACI template, snapshot scope doc, failed-control list, questionnaire triage sheet).
- Design the thumbnail system: one template, three variants, brand cyan on dark navy, six words maximum. Test at 210px wide — that is the real size on a phone.
- Set up tracking: UTM convention, a YouTube traffic segment in analytics, and a "first touch = YouTube" field on the lead record.

**Week 3**

21–27 Sep

- **Shoot day one.** Videos 01–04 in a single session, plus 12 shorts' worth of B-roll and standalone takes.
- Edit 01 and 02 to final. Cut six shorts.
- Write the blog versions of 01–04 for 3hue.net/insights — this doubles as the fix for nine articles all dated 2026-01-20.
- Warm the LinkedIn audience: Andrew posts twice a week on the same themes, no mention of a channel yet.

#### Week 4

28 Sep – 4 Oct

- Edit 03 and 04. All four videos scheduled, thumbnails A/B ready, chapters and end screens set.
- Dry run the full linking chain end to end: description link → landing page → form → CRM → follow-up email. Click every link yourself.
- Brief sales on the slate: which video answers which objection, and the timestamp to send.
- Line up guest #1 for The Room and confirm their clip rights.

### PHASE 1 **Launch — four videos, four weeks, full distribution**

5 Oct – 1 Nov

#### Week 5

5–11 Oct

- **Video 01 publishes Tuesday 09:00 ET.** Same-day: Andrew posts the native cut to LinkedIn with the YouTube link in the first comment; company page reposts; blog version goes live with the player embedded.
- Two shorts Wednesday and Friday, both pointing at 01.
- Email the house list — link to the blog post, not to YouTube. Keep the click in owned property.
- Answer every comment within 24 hours in the first month. This is not optional; early engagement is what tells YouTube who the video is for.

#### Week 6

12–18 Oct

- Video 02 publishes. Same distribution chain.
- First read on 01: click-through rate, average view duration, traffic sources. Do not touch the title before 72 hours of data.
- Sales starts sending timestamp deep-links in follow-ups. Log which ones land.

#### Week 7

19–25 Oct

- Video 03 publishes — the first Findings episode, and the first thing on the channel a competitor cannot copy.
- Swap the thumbnail on video 01 if CTR is under 4%. Keep the title if retention is holding.
- Shoot day two: videos 05–08.

#### Week 8

26 Oct – 1 Nov

- Video 04 publishes.
- **30-day review.** Not "did we get views" — did anyone we want to talk to watch, and did any of them reply. Pull the list of companies from the landing-page fills and score them against the ICP scorer.
- Decide what gets cut. If a franchise produced nothing in four weeks, it does not get a fifth.

**Weeks 9–10**

2–15 Nov

- Videos 05 and 06. The Filing slot goes live: one reserved editing day a week, held for whatever moves.
- First guest recorded for The Room. Give them a ready-made clip pack and copy so distribution costs them nothing.
- Start the retargeting audience from video viewers — the cheapest qualified audience 3HUE will ever have.

**Weeks 11–12**

16–29 Nov

- Videos 07, 08 and 09 — 09 is the first Walkthrough, and the first time the channel shows AiVRIC doing something rather than describing it.
- Refresh the two weakest thumbnails and titles from the launch slate — old videos improve; this is where compounding starts.
- Shoot day three. By now the format should take under a day for four videos.

**Weeks 13–16**

30 Nov – 27 Dec

- Videos 10–12. Findings episode two, with a full quarter of aggregate data behind it. The Room runs only if a guest cleared the name-recognition gate; if none did, that slot becomes a second Walkthrough.
- **90-day decision.** Against the benchmarks in section 10: continue, change lane, or stop. Stopping in December is a legitimate outcome and far cheaper than drifting for a year the way BABL AI did.
- Rebuild the slate for Q1 from what the comments actually asked for, not from what we assumed in September.

**07 One shoot, nine assets**

The channel only works if a single recording session pays for itself nine ways. This is the unit of production — not "make a video", but "run one topic through the whole chain".

Every asset in the chain is derived from the same twenty minutes of recorded material. Nothing in this diagram requires writing a second time from scratch. The dashed return path is the part most teams skip: the questions people ask in the comments and replies are the source list for the next shoot.

## 08 The linking map

Where every asset points, how it is tracked, and which document governs the copy. If a row has no destination, the asset does not get made.

| ASSET                                | POINTS TO                                                                                                 | TRACKING                                                                                | GOVERNED BY                      |
|--------------------------------------|-----------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------|----------------------------------|
| YouTube description, first two lines | 3hue.net/ <a href="#">ai-risk-snapshot</a><br>does not exist yet — the site CTA goes straight to Calendly | utm_source=youtu<br>tube<br>utm_medium=des<br>cription<br>utm_campaign=<br>{video-slug} | Message Stack ·<br>The Ship List |

| Gated asset (one only)           | AI governance audit report template                                                                       | form fill → CRM → ICP fit score                               | The Forcing Function — ICP scorer |
| The Walkthrough (revised in v3)  | the AiVRIC <a href="#">free tier</a> — ungated, no form. Deep product docs stay on AiVRIC's own property. | utm_source=3hue-yt<br>utm_medium= <a href="#">walkthrough</a> | Naming architecture — section 11  |
| Retargeting audience             | everyone who watched >30 seconds                                                                          | custom audience, refreshed weekly                             | Campaign kit                      |

**The blocking dependency, stated plainly.** Half this table points at 3hue.net. Right now the apex domain and the www subdomain serve two different websites, there is no sitemap, no canonical tag and no structured data anywhere on the site — which is why the company does not rank for its own name and page one is Crunchbase, ZoomInfo and D&B instead. Publishing videos that drive traffic into that is spending attention we cannot bank. *Week 1 of the rollout is the site, not the studio.*

Two more, verified 4 September: the homepage still advertises "Now accepting Q2 2026 Snapshot engagements" — a quarter that ended on 30 June — and the primary CTA goes straight to Calendly rather than to a landing page, so there is no form, no UTM capture into the CRM and no qualification before someone holds time on Andrew's calendar. The GTM deck named the Q2 language as its highest-priority fix; it is still live.

The rest of the marketing library plugs in here directly. **The Forcing Function** supplies the ICP scorer that grades every form fill. **The Message Stack** supplies the claims — nothing goes on camera that is not already in the claims library, including the seven items marked "do not use". **The Keyword Map** supplies the blog targeting. **The Ship List** supplies the CTA copy. **The Brand Sheet** supplies the thumbnail palette and type. **The Capability Map** supplies the service pages each video's CTA lands on. The channel is not a new workstream; it is the distribution layer the other eight documents were missing.

## 09 How it gets made

The failure mode for a founder-led channel is not bad video — it is week seven, when the founder has a client emergency and nothing ships. Everything below is designed so the channel survives a bad month.

### Batch, don't drip

one shoot day per month

Four long-form videos and twelve shorts' worth of material in a single session. One camera, one lav, one screen capture, one room. A month of publishing bought with one day of Andrew's calendar.

Summit 7 published 5 long videos in a year and drew 3.3M views. Cadence discipline matters more than cadence speed.

### The reserved slot

one editing day held weekly

The Filing cannot be batched — it exists to be fast. Hold one day a week empty. If nothing moves that week, that day goes to thumbnail refreshes on old videos, which is the highest-return work available after week eight.

Summit 7's top four videos are all same-week reactions to regulatory events.

### Two people, clear split

subject-matter + production

Andrew supplies the argument and the on-camera delivery. Marketing owns scripting from the Message Stack, the artifact that ships with each video, thumbnails, publishing, distribution and comments. Andrew never touches the publishing chain.

Per the delegation: decisions do not wait on him. Only the recording does.

### Kit — deliberately small

under \$1,500 all in

A decent camera or a recent phone on a tripod, a lavalier mic, one soft key light, and a quiet room with a non-distracting background. Audio is the only thing worth spending on. Viewers forgive soft focus; they leave on bad sound.

Every high-performing channel in the competitive set is a talking head or a screen share. None of them look expensive.

## Publish spec

non-negotiable checklist

Chapters on every video. Custom thumbnail, six words max, legible at 210px. First two description lines carry the CTA. End screen in the last 20 seconds. Pinned comment with the artifact. Closed captions reviewed, never auto-only — the terminology gets mangled and the transcript is what the blog post is built from.

Auto-captions consistently mistranscribe "ISO 42001", "SOC 2 Type II" and "ISMS".

## 10 What "working" looks like

These targets are built from what comparable channels actually do, not from what a marketing plan would like to promise. A boutique advisory firm publishing weekly to a niche B2B audience does not get 100,000 views in a quarter, and any plan that says otherwise is selling something.

| HORIZON                 | WHAT WE MEASURE                                                                               | TARGET                                           | WHY THAT NUMBER                                                                                                                                                                                     |
|-------------------------|-----------------------------------------------------------------------------------------------|--------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 30 days<br>by 1<br>Nov  | Videos shipped on schedule · click-through rate · average view duration                       | 4 / 4 videos<br>CTR > 4%<br>AVD > 40%            | Shipping on time is the only thing fully in our control in month one. CTR and retention tell us whether the titles and the first 30 seconds are right — long before view counts mean anything.      |
| 60 days<br>by 1<br>Dec  | Views per video · subscribers · landing-page sessions from YouTube · ICP-qualified form fills | 200–800 / video<br>100–400 subs<br>≥ 3 qualified | BABL AI — the closest structural twin to 3HUE — averages 794 views per video after 181 uploads. SecureGovernance averages 159. Landing in that band on twelve videos is a normal, healthy start.    |
| 90 days<br>by 27<br>Dec | <b>Qualified conversations sourced or assisted by the channel</b>                             | 3–10                                             | This is the only number that decides whether the channel continues. Everything above it is a leading indicator. At 3HUE's deal size, three conversations pays for the entire quarter of production. |
| Ongoing                 | Comment questions logged into the next slate                                                  | every episode                                    | The comments are free customer research from exactly the audience we are trying to reach. A channel that does not mine them is publishing blind.                                                    |

**The metric we are explicitly not optimising:** subscribers. The career-intent keywords would grow subscribers fastest and would make the channel less valuable, not more — that is precisely the trap in section 01. If subscriber growth and qualified-conversation growth ever point in different directions, we follow the conversations.

## 11 Decisions & the one open call

Andrew has asked not to be a decision bottleneck on marketing direction. These are made and logged. One genuinely cannot be made without him — and it is flagged as such rather than assumed.

### Which brand owns the channel?

3HUE. AiVRIC still gets no channel of its own this quarter — splitting attention across two young channels halves both. **Revised in v3:** AiVRIC product walkthroughs are now 3HUE channel content, not outbound links.

---

One brand, one cadence, and the product content sits where the audience already is.

### Which keyword lane?

AI governance operations and ISO 42001. Not vCISO — the term returns under 750 searches a month and every variant is dead. Not generic cybersecurity — the category is contracting 19–23% year over year.

---

ISO 42001 rose again on the 9 September re-pull — 17,487 a month, up 29% in a week, at a competition score of 23 — while "ai governance" fell to 47,568 and -34%. The lane is not just open; it is opening further.

### Cadence?

One long-form a week, three shorts a week, batched into one shoot day a month. Not daily. Volume without focus produced 159 views per video for SecureGovernance across 199 uploads.

---

Frequency is the easiest thing to fake and the fastest way to burn the founder's calendar.

### Gate the content?

No — with one exception. Every video artifact is ungated except the AI governance audit report template, which is the single form-fill that feeds the ICP scorer.

---

One gate that people want beats five nobody fills.

### Shorts CTA?

The long-form video, always. Never the website. Shorts traffic converts off-platform at a rate close to zero; its job is to feed the long-form watch.

Stuart Barker: 388 shorts at 975 views each vs. 32 long videos at 11,928 each.

### ✓ Resolved in v2 — who is on camera?

Four people, not one. The GTM deck names the cast: **Andrew** on board-level AI risk, **Shay** on security operations, **Ariel** on Power Platform governance, **Teriah** on business analysis. Andrew fronts The Snapshot and hosts The Room — roughly one day a month. The Bench carries the biweekly slot without him.

This closes the open question from v1 and removes the founder dependency that was the channel's biggest structural risk. What remains is scheduling, not a decision.

### ✓ New in v3 — does product content belong on the channel?

Yes, and near the front. **The Walkthrough** runs biweekly at 6–12 minutes, showing AiVRIC and the surrounding tooling doing real work. v2 sent this content outward to AiVRIC's own property; that was wrong on the evidence.

Dejan Kosutic's five product overviews are his top five videos at ~2.9M views combined; Stuart Barker's toolkit demos are his #2, #7 and #8. Two independent channels in this exact category, same result. Nobody had measured this when v2 was written.

### ✓ New in v3 — how long is too long?

Forty minutes, and only with a named guest. Six to twelve for The Bench and The Walkthrough, twelve to eighteen for The Snapshot and The Filing, fifteen to twenty-five for The Findings, twenty-five to forty for The Room.

v2 leaned on ControlCase's ~22-minute long-form average. Their actual winners are 7–10 minutes and their 25–70 minute webinars land under 1,700 views. Dejan's top ten runs 5:29–14:45.

### ▮ Open — needs verification, not a decision: veteran-owned status

The 2024 strategy deck states 3HUE is a **Veteran-Owned Small Business**. It appears on no current public page, in no third-party listing we found, and in none of the other eight documents. If the certification is current it is a material asset with exactly the regulated and federal-adjacent buyers in the ICP.

Someone needs to confirm VOSB vs SDVOSB and the SBA registration status before it goes anywhere public. This is a records question, not a marketing call.

## 12 What we're not doing

Each of these is a plausible idea we are declining on purpose, so nobody re-proposes it in week six.

|                                                        |                                                                                                                                                                                                                                                                                                                      |
|--------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Certification training content                         | The largest demand in this category — and it builds an audience of job seekers. This is the single documented failure mode in the competitive set.                                                                                                                                                                   |
| A vCISO franchise                                      | "vCISO", "virtual CISO" and "vCISO services" all return under 750 searches a month. There is no YouTube audience to serve, which corroborates the near-zero view counts on existing vCISO videos.                                                                                                                    |
| Chasing "what is AI governance"                        | 13,131 searches a month at competition 44. Definitional traffic that watches thirty seconds and never books anything.                                                                                                                                                                                                |
| Shorts-first                                           | Cheaper to make and twelve times less effective per video on the one channel where we can compare both formats directly.                                                                                                                                                                                             |
| Daily posting                                          | Two channels in the set published 118 and 101 long videos in a year, for roughly 170 and 810 views each. Frequency is not the variable.                                                                                                                                                                              |
| Naming clients on camera                               | Not without written consent. "A large North American bank" remains the correct phrasing until a release is signed — which is worth pursuing, because the Findings franchise gets materially stronger with a name attached.                                                                                           |
| Paid promotion before month four                       | Paying to distribute content we have not proven organically buys reach for a message that may still be wrong. Retargeting warm viewers is the exception, and starts in week nine.                                                                                                                                    |
| A second channel for AiVRIC                            | Not this quarter. One channel with a real cadence beats two with a stalled one. Revised in v3: the product content still gets made — it just gets made <i>here</i> , as The Walkthrough, instead of on a channel nobody has subscribed to yet.                                                                       |
| A monthly guest episode regardless of who the guest is | The Room runs only when the guest's employer is a name a buyer recognises. Summit 7's Boeing episode was the fastest-accelerating video in the whole competitive set; Dejan Kosutic's peer-consultant interviews are near the bottom of his top fifty. Same format, opposite outcome, and the guest is the variable. |
| Titling anything "AI governance"                       | The term fell 15% in a week and reads -34% against its own baseline, at competition 42. It stays in descriptions, tags and the                                                                                                                                                                                       |

positioning language on the site — but ISO 42001 and "AI compliance" go in the title bar.

---

---

**Sourcing.** All search volumes, competition scores, growth percentages, channel statistics, video view counts and title CTR scores in this document were pulled from vidIQ on 2–3 September 2026 and are reproduced as returned. Competition and CTR scores are 0–100 scales. Growth figures compare current demand against a 30-day baseline.

No figure in this document is estimated or illustrative. Where a metric was unavailable it is shown as — rather than filled in. Website findings for 3hue.net (the apex/www split, missing sitemap, absent canonical tags and absent JSON-LD) were verified directly against the live site and are documented in *The Keyword Map*.

**v2 additions.** The on-camera bench, the 6–10 minute explainer format and the Snapshot-first CTA come from the 2026–2027 GTM deck supplied by the marketing leader. The Q2 2026 availability language, the apex/www split and the absence of a landing page behind the CTA were re-verified against the live site on 4 September 2026. Full reconciliation in *The Handoff*.

**v3 additions, 9 September 2026.** A second vidIQ pull refreshed the AI-governance keyword cluster and added Dejan Kosutic (426,000 subscribers) at video level — the largest channel in the category and the closest strategic twin to 3HUE + AiVRIC, which the v2 competitive set did not include. That pull produced four changes: **The Walkthrough** as a sixth franchise, the flagship runtime trimmed to 12–18 minutes, a name-recognition gate on The Room, and the crossover finding that ISO 42001 is rising while "AI governance" falls. Full data and method in *the 3HUE YouTube Data Book*. vidIQ credits were exhausted on 9 September before the regulatory-reaction cluster (EU AI Act, DORA, NIS2) and the buyer-intent cluster (security questionnaires, third-party risk) could be pulled; The Filing franchise is therefore still unquantified and should be topped up before it launches.

**On the growth column.** vidIQ appears to band its growth metric rather than report a continuous value —  $-45.8\%$  and  $+84.5\%$  each recur across unrelated terms in separate pulls. Directions and rank orders in this document are reliable; the magnitudes should be read as bands, not measurements. One week is not a trend: the crossover in section 01 needs a third and fourth weekly data point before it justifies a year of production.

Claims used on camera must come from the claims library in *The Message Stack*, including its seven "do not use" entries. Competitor channel data is public YouTube metadata; nothing here is confidential to those firms.
